

Foundation Training Setup

Pre-Requisites

- Blue Prism installed locally (version 4.2 or greater)
- Valid Blue Prism license
- New Blue Prism database – This can be a local SQL Express DB or an SQL Server DB. It must not be a shared database and access must be for the trainee only.
- Microsoft Excel 2003 or greater
- Blue Prism access credentials for the trainee. The trainee must have full privileges within Blue Prism. The default admin ID can be used.

Training Application

The Foundation Training application is a single executable file (**TrainingOrderSystem.exe**) that must be save to C:\BluePrism\Training\Applications\Windows.

The credentials for the application are:

Username: bp

Password: password

Case File

The case file used in the exercises is **Orders.csv**.

This must be saved to C:\BluePrism\Training\Applications\Windows

Default Processes, Objects and Work Queues.

The Foundation Training Course relies on a series of pre-existing process, objects, work queues and work queue data.

Import the Blue Prism release **Foundation Training Setup.bprelease** into your Blue Prism database. Select File – Import and select the release.

To pre-load the work queue in preparation for Chapter 9 open the **Load Queue** process in Process Studio and run it.

- File – Open – Process (select the **Load Queue** process)
- Run the process by pressing the “play” button  on the toolbar
- Close the process
